Teague Electric Construction

Our client's desire was to create a "European style wet area" as a part of their new master bath design. The freestanding tub and the shower is enclosed with wall to wall heavy glass panels and a hinged door. A new vanity with improved storage and the placement of counter towers at each end creates excellent balance and symmetry to the space. A large tall three door linen cabinet was installed in the area where the old shower was located. The use of three different decorative glass tiles in soft blue and gray tones creates a "calming spa" affect.

2017 **REMY**  
REMODEL OF THE YEAR
